WHOLE FOODS

FREQUENTLY ASKED QUESTIONS:

What is Hemp?

Hemp, also referred to as industrial hemp, is the fiber and seed, non-psychoactive (less than .3% THC) part of the Cannabis Sativa L plant. It is one of the most versatile plants in the world and has a long history of use as a food, fuel, fiber, and medicine.

Can Hemp get you “high”?

Hemp CANNOT get you “high,” because industrial hemp varieties contain virtually zero tetrahydrocannabinol (THC), and are completely non-psychoactive when consumed in the body. There have been thousands of medical studies showing all of the health benefits of taking hemp oil, but “average” people love it because it doesn’t produce any mind-altering psychoactive effects.

Why is using a Full Spectrum Hemp Oil important?

It’s POWER IN NUMBERS! Researchers estimate that there are more than 180 different phytocannabinoids naturally occurring in hemp, each having the ability to work in different ways in our bodies. ONLY a high-quality source of FULL SPECTRUM Hemp Oil provides the full array of endocannabinoid nutrients such as, phytocannabinoids, flavonoids, terpenes, vitamins, minerals and omega fatty acids, each of which has fantastic potential to impact your health positively. These endocannabinoid nutrients are in every single drop of VRelief!

The benefit to the consumer of using FULL SPECTRUM Hemp Oil is what’s commonly referred to as the “Entourage Effect,” a synergistic phenomenon created when hundreds of natural components within a plant interact together with the human body to produce a stronger influence than any one of those compounds used alone.

Some products on the market offer only a single phytocannabinoid (isolate CBD), but only the full array of phytocannabinoids and endocannabinoid nutrients present in VRelief can deliver hemp’s complete range of health boosting properties.

How does VRelief work in the body?

VRelief interacts with the body through our Endocannabinoid System or ECS. The ECS is the regulator of our body’s homeostasis or the process that keeps our entire body stable and in balance. Homeostasis, derived from the Greek words for “same” and “steady,” is responsible for functions such as mood, sleep, appetite, hormone regulation, pain and immune response, as well as repairing damaged cells in our bodies. Endocannabinoids connect with receptors on the surface of our body’s cells called cannabinoid receptors. There are two primary receptors, CB1 and CB2. The activation of these receptors initiates intracellular biochemical reactions. The endocannabinoid nutrition provided by VRelief strengthens and improves the efficacy of our mitochondria, the power source for every cell in your body, and insures that your receptors are working properly to keep your ECS functioning the way it is supposed to.

What are the Health Benefits of VRelief?

When we ingest VRelief, our Endocannabinoid System is activated. Research indicates that when you supplement your ECS with non-toxic, non-addictive endocannabinoid nutrition found in VRelief, it is possible to develop a healthier endocannabinoid system and a healthier life. Research has also shown that nourishing your ECS through endocannabinoid nutrition can potentially act as a biological defense system, supporting our immune system and helping promote restful sleep, reducing stress and nervousness due to common everyday overwork and fatigue, and helping you relax. VRelief also helps support cartilage and joint function as well as supporting normal mental function. A healthy endocannabinoid system properly regulates mood and energy.

FREQUENTLY ASKED QUESTIONS:

When Should I take VRelief?

VRelief can be taken any time of the day as needed or as recommended by your healthcare professional.

Can I take VRelief with other Vfinity Products?

Yes, VRelief can be taken in conjunction with our complete line of Vfinity products.

What makes VRelief different from other hemp oil products in the marketplace?

ABSORPTION! ABSORPTION! ABSORPTION! VRelief was specially crafted to be completely water soluble in your body through the use of our proprietary Super Micro Absorption Liposome Technology.

Super Micro Absorption Liposome Technology is a special manufacturing process that creates micellized particles that allow the body to immediately absorb the nutrients and make them bioavailable in your system.

Simply put, our bodies are made up of 60% water. As you know, oil and water don't mix very well. VRelief works by using molecules that are smaller than a water molecule, that immediately begin to circulate the endocannabinoid nutrients in your body once ingested. This unique manufacturing process allows the body to quickly and effectively absorb the liposomes that would normally be destroyed by the harsh, digestive process.

END RESULT: Our technology allows you to realize the full potential of the endocannabinoid nutrition provided by VRelief, so that not one drop is left behind!

What is the proper amount of VRelief that will work best for me?

As always, we advise you to consult with your healthcare professional for any medical advice. The suggested use for best results is two full droppers of VRelief by mouth, or mixed in water and swallow, which provides 20mg of Full Spectrum Endocannabinoid Nutrition. However, as our Endocannabinoid Systems vary from person to person, as well as the individual results one is looking to achieve, you may desire to increase your intake of VRelief. We suggest moving up slowly, one dropper full at a time, until the desired results are achieved.

Will I fail a drug screening from taking VRelief?

Most workplace drug screens test for delta9-tetrahydrocannabinol (THC) and will not detect the presence of endocannabinoid nutrients, or other legal, natural hemp-based components. Please note that studies have shown consuming hemp oil or hemp-based foods can cause FALSE positive results when screening urine and blood specimens. If you are subject to drug testing or screening, we recommend that you do NOT take this product and consult with your healthcare provider, drug screening company, or employer before use.

How does an inferior hemp product differ from FULL SPECTRUM VRelief?

Inferior products use isolated, individual phytocannabinoid compounds, unlike our high-quality, FULL SPECTRUM hemp oil. Low-quality products might contain harmful solvents or use other harmful extraction methods that make it difficult for the body to absorb. Some of these products might not provide the potency they claim and can have inactive or poorly grown hemp with little to no phytocannabinoids present. Vfinity, an innovator in the health and wellness industry, takes the lead with VRelief FULL SPECTRUM Hemp Oil with Super Micro Absorption Liposome Technology for immediate absorption and bioavailability.
